

Solving a linear system

Question 1 / 10 points

Solve $2x + y = 5$ and $x - y = 1$ using row reduction.

Show the intermediate operations.

Starting matrix

$$\left[\begin{array}{cc|c} 2 & 1 & 5 \\ 1 & -1 & 1 \end{array} \right]$$

Intermediate work not supplied

$$\left[\begin{array}{cc|c} 1 & 0 & 2 \\ 0 & 1 & 1 \end{array} \right]$$

Final answer: $x = 2$, $y = 1$

-2 points: intermediate operations are missing.

Correct reduced form and final values. Score: 8 / 10

Demo rubric: row work 8 points; final values 2 points.
